**Primary and District High School Home-Area Maps**

School Name: \_\_\_\_\_

Submitted by: \_\_\_\_\_

The following criteria have been used to determine the school home-area maps:

- current school building infrastructure and current utilisation
- current student enrolment data
- student current home address
- distance of home address to local school
- recent school closures and amalgamation decisions
- road and transport infrastructure
- natural geographic boundaries

Has the application of the above criteria resulted in a school home-area map that will have a negative **educational impact** on a significant number or specific group of students?

Are there any significant issues that will affect students' educational outcomes that have not been considered in the application of the criteria to the local situation?

Will the new home-area map result in any unintended consequences for students' educational outcomes.
